Collection systems for garbage, waste, and recyclable waste

2019

Collection systems for garbage, waste, and recyclable waste

Residual garbage, organic waste and the **yellow bag** are collected from your home. Please take **paper, glass, and clothes** to the containers which are located at various points in the whole district.

Toxic waste is collected by the local authority three times a year.

You can deposit the following things at the **recycling center**:
building waste, electrical and electronic scrap, fat, freezers, garden waste, glass, domestic batteries, wood, cardboard, clothes, cork, fluorescent lamps, paper, scrap metal, residual garbage and **bulky waste**.

Please make sure that the various kinds of waste are **clean**.

The **opening hours** of the **recycling center** are available at your local authority or district office.

Building blocks of the collection system:

Building waste:

Broken concrete, bricks, etc. are accepted in small amounts at the recycling center in some local authorities. Large amounts must be taken to the collection center for rubble.

TV monitors:

There is a special container in the recycling center for computer and TV monitors.

Organic waste:

Biodegradable organic waste must be placed in the compost bins for collection once every 2 weeks. The compost bin is supplied by the local authority.

What kind of waste is **not** collected?

Plastic bags, street sweepings, stones.

Things you should observe for collections:

Organic waste becomes compost. Plastic bags are not biodegradable. So **please do not place plastic bags** in the compost bins. Instead of plastic bags, use **bags made of paper**. You can obtain new paper bags **free of charge** from the recycling center in your local authority. After the compost bin is emptied, it is very important to **clean** it. You should do this regularly (especially in summer).

What does the compost bin cost per month?

120 l (for max. 10 persons)	€ 5.55
240 l (for max. 20 persons)	€ 11.10

Electrical and electronic scrap:

Electrical and electronic scrap (power drills, computers, radios, telephones, video systems, etc.) can be supplied to the recycling center **free of charge**. **Refrigerators and large domestic appliances** (washing machines, cookers, etc.) are collected separately.

Fat:

Fat for deep frying and cooking fat are accepted at the recycling centers. Liquid fat can be disposed of by pouring it into one of our big tanks. Solid fat must be disposed of without the packaging.

Yellow bag:

The following things can be placed in the yellow bag:

- ◆ **metal:** tins, aluminum foil
- ◆ **plastic:** carrier bags, plastic bottles, yoghurt cartons, etc.

For more detailed information, please read the notices on the yellow bags which are supplied by recycling centers free of charge.

➤ Tip ◀

Cartons, paper and **glass** packaging are collected in special containers.

Glass:

There are 3 containers for glass of different colors. When you dispose of glass, please separate them carefully according to the colors. You can find these glass containers all over the district.

Large domestic appliances (electrical):

Large domestic appliances (electric cookers, dishwashers, washing machines, etc.) are collected in a separate container.

Cardboard:

All sorts of cardboards are collected in containers at every recycling center.

Please do not throw any cardboard into the yellow bag.

Clothing:

Clothing in good condition, bedding, and table cloths, shoes, etc. are collected in clothing containers.

Freezers and refrigerators:

Freezers and refrigerators must be taken to the recycling centers. They are accepted **free of charge**.

Building waste and domestic garbage:

Building waste and **domestic garbage** can be deposited in small quantities at the recycling center (€ 4.00 for every 100 liters started).

Paper:

Containers for paper are situated near your home. Newspapers and catalogues can be disposed of there.

Greaseproof paper is not accepted.

Toxic waste:

Normal amounts of toxic waste (for example batteries, toxic substances, medicine) are collected at every local authority **three times a year**. The dates are published in the "Amtsblatt" and in the daily press. Please remember that dispersion wall paint is suitable for disposal in the regular garbage containers. If it is wet, please dry it off first.

Residual garbage:

Garbage for which there is no separate collection system (e.g. garbage that does not belong in the compost bin, yellow bag, recycling containers, hazardous waste) belongs in the residual garbage bin. The residual garbage bin is obtainable from your local authority (collected every 2 weeks).

What does **not** belong in the residual garbage bin?

All recyclable materials for which there are other disposal possibilities, especially **hazardous waste**.

What must you remember for collection?

If the residual garbage bin is not big enough for your garbage, you can obtain additional residual garbage bags from your local authority (includes a garbage collection fee of € 2.50).

What does the residual garbage bin cost per month?

120 l bin (for max. 8 persons):	€ 11.70
240 l bin (for max. 16 persons):	€ 23.40
1100 l container (max. 73 persons):	€ 107.25

Metal scrap:

Bicycles, iron scrap and metal products belong in the scrap container. **Washing machines, etc.**, are **not** scrap and belong in the container for large domestic appliances.

Bulky waste:

Bulky waste includes large-size **domestic waste** that may occur during **house removals**. This includes sofas, chairs, mattresses, carpets, etc. **Building waste** (doors, windows, flooring, garage doors, etc.) and **domestic garbage** are **not** bulky waste. Bulky waste can be deposited at the recycling center for a **charge of € 2.50 per half cubic meter** started.

Bulky waste wood:

Furniture made of painted or unpainted wood, and wooden furniture with **plastic coatings** are collected **free of charge** in the **wood container**. Wood from outside, e.g. gardens or the forest, is **not** accepted.
